PROFESSIONAL SUMMARY

Backend and platform-focused Software Developer at Amdocs with 3+ years of experience building Java Spring Boot microservices, distributed data flows, and internal delivery tooling for telecom-scale systems. Skilled in Kafka, Kubernetes, Redis, Cassandra, PostgreSQL, React, CI/CD, charging, billing, ordering, and service-access platforms.

TECHNICAL SKILLS

- Languages and backend: Java, Spring Boot, Microservices, REST APIs, Python, Flask, JUnit, Mockito
- Event-driven systems: Kafka, Camunda, asynchronous processing, distributed services, high-throughput APIs
- Databases and caching: Redis, Cassandra DB, Couchbase, PostgreSQL, SQL, NoSQL
- Cloud and DevOps: Kubernetes, Docker, GitLab CI/CD, Jenkins, Vault, AWS, Azure, Fabric8
- Frontend and tooling: React.js, Angular.js, JavaScript, TypeScript, Postman, TestNG, Git
- Domain strengths: Telecom charging, digital billing, service ordering, platform tooling, performance optimization

PROFESSIONAL EXPERIENCE

Experienced Software Developer | Amdocs | Pune, MH, India | 07/2025 - Current

- Production Deployment Tool: Built an internal dashboard with Java Spring Boot, Fabric8, GitLab REST API, React.js, and Vault to streamline feature testing. Added environment comparison, change validation, and caching for ~500 concurrent API calls, reducing developer and tester delivery effort by 20%.
- AT&T Openet: Developed Openet CHF-CGF microservices with Java Spring Boot, Redis, Cassandra DB, Kubernetes, and Kafka to process accounting events from AT&T Network Access Servers. Enabled real-time charging for 50M+ subscribers' data and talk-time usage, scaling to 1M+ events/sec with 99.9% accuracy.
- Metro By T-Mobile: Built Spring Boot, Kafka, Angular.js, Jenkins, and Kubernetes services to deliver post-acquisition access for 20M+ Metro brand users. Improved adoption by 15% and reduced service integration time by 40%.

Software Developer | Amdocs | Pune, MH, India | 07/2023 - 06/2025

- TMO DGB: Built Digital Billing aggregation microservices for T-Mobile using Java Spring Boot, Kafka, Redis, Vault, GitLab CI/CD, and Kubernetes. Bridged legacy SOA and new billing systems for 40M+ subscribers, aggregating 5M+ daily records with 99.9% reliability and 50% faster data sync.
- NorthStar: Modernized T-Mobile ordering from legacy SOA to Java Spring Boot, Kafka, Camunda, Couchbase, PostgreSQL, Jenkins, and Kubernetes microservices for 5M+ enterprise subscribers. Delivered 99.99% uptime, rolling updates, async processing, 100+ features/fixes, 30% faster deployments, and 4x order throughput.

Backend Intern | DUBDUB.AI | Pune, MH, India | 10/2021 - 01/2022

- Multiprocessing: Optimized a Flask/FFmpeg media service with Python multiprocessing by partitioning workloads across workers, increasing throughput by approx. 300% for 10K+ daily media tasks.
- Training Pipeline: Built a Python Flask data pipeline with Google API client, AWS S3/EC2, and Docker for ML training. Automated Google Sheets ingestion for 1000+ daily records, cutting prep time 70% and accelerating model training cycles by 50%.
- Gamify: Designed and launched a usage-based monetization microservice with Python Flask on AWS Docker. Created ER/UML diagrams and enabled early billing workflows, driving \$200K initial revenue and 35% faster go-to-market.

EDUCATION

- Master of Computer Applications | NIT Trichy | Tiruchirappalli, India | 07/2020 - 06/2023
- Bachelor of Computer Applications | University of Rajasthan | Jaipur, India | 07/2017 - 06/2020
- Schooling | Rashtriya Military School | Ajmer, India | 04/2010 - 03/2017
